1. The 1954 production plan of VEB Mineraloelwerk Lustekendorf, one of the plants under the Main Administration for Liquid Fuels in the Production Area for Chemistry of the East German Ministry for Heavy Industry, provides for an increase in gross production (in measurement values) to 104.5 percent of actual 1953 gross production. In crude oil processing production is to be increased by about 13,900 metric tons over 1953. During January 1954 the enterprise experienced difficulties in procuring crude oil, particularly crude oil from Austria. The following amounts of crude oil are required from Austria during 1954: 69,500 metric tons crude oil with a paraffin base (P-Oel); 59,500 metric tons of crude oil with an asphalt base (A- und M-Oel); and 44,000 metric tons of oil from Matzen, Austria.
2. Electric power production during 1954 is to be increased by 47 million kwh over 1953. Distribution to the public power net is to be increased by 40 million kwh.
3. Lignite powder production is to be increased by about 15,000 metric tons in 1954.
4. Production of compressed oxygen in bottles will be increased by about 120,000 cubic meters, making total 1954 production about one million cubic meters.
